Personal Profile

A hardworking, professional and adaptable software graduate who is passionate and experienced with various development approaches. Able to be a key member of the development process and lifecycles.

I have acquired experience working with teams of 7-10 people from varying technological backgrounds, through university, to develop software for real-life clients. These clients ranging from both the social and health services. Since graduating, I have gained further experience working with clients from small businesses working as a part-time freelance mobile/ front-end developer. These projects included carrying out design, development, testing and reviewing feedback. As well as following project methodologies and life-cycles. Working on personal projects has also enabled my abilities to create software to a high standard.

Actively looking for a software development graduate position in a professional environment with a team I can learn from to improve my programming, development and problem-solving skills.
